EDUCATION

BS Computer Science, Oregon State University

Exp Dec 2026

- 3.91 major GPA

BSc Finance, Santa Clara University

Jun 2021

- 3.81 GPA | Management Information Systems minor | magna cum laude | Honors Program

EXPERIENCE

KPMG | San Francisco, CA

Sep 2021 - Present

Senior Cybersecurity & Technology Risk Consultant

- Collaborated with Systems team of Fortune 15 technology company, supporting eight accounting groups to build and maintain SQL driven revenue reporting pipelines using Google Plx Scripts and BigQuery
- Improved transformation efficiency of ETL process by optimizing SQL queries and refactoring data transformations, reducing resource consumption by 30% and job run time by 25%
- Led development of core financial modeling workflows that queried and processed billions of records from cloud-hosted database, enabling automated fluctuation analysis and visualization with Google Plx Dashboards

Associate Technology Consultant

- Coordinated schedule change migration for 475 financial reporting workflows across entire business unit, constructing dependency mapping and leading QA testing for changes in development environment
- Automated 20 hours per month of manual spreadsheet processes using Google AppScript (JavaScript-based)

PROJECTS

Distributed Web History Summarizer | Python (BeautifulSoup), Docker, RabbitMQ, Ollama LLM (Granite3.2)

- Engineered a scalable distributed system to process and summarize user browser history with AI, orchestrating multiple containerized workers via RabbitMQ for fault-tolerant message queuing and horizontal parallelism
- Integrated a local LLM (Granite3.2) via Ollama for automated webpage summarization, storing results in SQLite and providing a CLI frontend interface for fast semantic search of processed history

Fitness Tracker Web Application | Angular, Express.js, Node.js, PostgreSQL, Docker

- Designed and implemented full-stack fitness tracker using Angular, PostgreSQL, and Express.js REST API, deploying services with Docker and utilizing microservices architecture for scalability and maintainability
- Developed key features including workout history trend analysis, friend activity comparisons, motivational quote generation, and dynamic powerlifting standard calculations for personalized insights

Southwest Flight Price Tracker | Python (Selenium), React.js, GitHub Actions, MongoDB

- Built full-stack price monitoring system for Southwest Airlines using Selenium for scraping, GitHub Actions for automation, and React.js frontend to capture user additions into MongoDB NoSQL tracking database
- Enabled users to receive real-time email alerts when prices dropped below original booking, saving costs and enhancing travel planning efficiency

Undergraduate Honors Thesis | Python (NLTK, Tweepy, scikit-learn, pandas, numpy, matplotlib)

- Investigated financial sentiment analysis by building predictive trading model in Python, applying TF-IDF, SVC, and Logistic Regression to outperform the Dow Jones with statistically significant results ($p < 0.07$)
- Collected and processed six months of Twitter sentiment data and historical return data to train model, then validated predictions on unseen month to ensure generalization

SKILLS

Languages: Python, JavaScript, TypeScript, Java, SQL (PostgreSQL, MySQL), HTML, CSS, Unix Shell

Frameworks/libraries/tools: GCP (App Engine, Datastore), Flask, Express.js, React.js, Node.js, Docker, MongoDB, Git
